ENERGY POLICY

We strive to achieve 1% specific energy reduction every year in next 5 years with the following efforts:

1. By applying innovative/creative ideas in operational techniques as per the suggestions/discussions/brainstorming among Associates (Employees).
2. By improving specific energy norm based on process evaluation, machinery performance and condition monitoring with the help of in-house study groups and reputed external agencies and adopting efficient measures.
3. By de-bottlenecking the limiting areas to improve plant reliability and availability with the help of process licensors and engineering consultants.
4. By benchmarking with the most energy efficient plants and comparing the provisions/facilities through survey group study, plant visits, workshop/conference participation and implementing the beneficial outcome.
5. By firming up full NG availability for Unit-II operations through various NG suppliers and eliminating Naphtha usage.
